By J Paul Clayton

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Steam Consumption of Locomotive Engines From the Indicator Diagrams The use of steam for auxiliaries such as the air pump, the train heating system, blower, electric train - lighting sets, and also the loss of steam or water through the safety valves, blow - off valves, and boiler leaks render impossible the determination of the actual steam consumed per unit of power developed by the engines, since from to possibly 15 or 20 of the steam generated is used by the auxiliaries, or is lost. It is thus practically impossible under ordinary conditions to measure the actual steam consumption of the engines.
