Reviews

A very wonderful pdf with lucid and perfect answers. Of course, it is play, nevertheless an amazing and interesting literature. You can expect to like just how the article writer compose this book.

ABOUT NONSENSE-MEDIATED QUALITY CONTROL MECHANISMS IN MAMMALS

Nonsense-mediated mRNA decay (NMD) recognizes and degrades mRNAs that harbor a premature translation termination codon (PTC). Yet, the molecular mechanism of NMD is not solved. A central step is the distinction of a PTC from a normal translation termination codon. We found that normal mRNAs can be turned into an NMD substrate by elongating the 3 untranslated region (3 UTR) in mammalian cells. Furthermore, PTC- containing mRNAs can be stabilized by bringing the poly(A) tail in close spatial proximity of the PTC, and consistently, PTC-containing mRNAs are stabilized by tethering of poly(A)-binding protein. Together with studies performed in other eukaryotes, we propose an evolutionary conserved, unified model for PTC recognition. Most importantly, these results demonstrate that spatial rearrangements of the 3 UTR can modulate the NMD pathway and thereby provide a novel mechanism for posttranscriptional gene regulation. 104 pp. Englisch.
